Java Final Assignment

Problem Statement

Task Tracking System

I should be able to define the details of the Programs in a file and import them into my system.

Each Program can have multiple projects

but a project can only be associated with a single program.

Each project is defined by:

Individuals who have enrolled in this project

the task and the Individual who is the owner of the task

What is Required?

Define a file format which can be directly imported into my system. the file would have information for all the programs/projects/tasks and individuals

Create functionality to find all the programs where a given Individual is enrolled in.

Create functionality to find all the projects where a given user is enrolled in.

Create functionality to identify the total pending task for a given user.

Create functionality to identify total pending tasks for a given user and given program.

Create functionality to identify total pending tasks for a given project.

Create functionality to identify the program name for a given project.
