Assignment 16

Templates in AEM

Problem Statement

You are working on the **WKND AEM project** and need to design **editable templates** that balance **layout control** and **author flexibility**.

Task

Create **2 editable templates** using **only the WKND package**.

You may:

- Reuse existing WKND templates or template-types
- Create custom templates or template-types if required

Requirements

For **each template**, implement the following:

1. **Global Header**
a. Must appear on every page created from the template
b. Must not be editable or removable by content authors
2. **Hero Banner**
a. Should be present when a page is created
b. Authors must be able to edit or remove it
3. **Main Content Area**
a. Should allow authors to add, remove, and reorder components
b. Should be empty when the page is first created
4. **Footer / Legal Section**
a. Must be present on all pages
b. Content must remain consistent and not authorable
5. **Optional Promotional Component**
a. Should be available in the template
b. Authors may choose to keep or remove it per page

Created two templates:

Canadian specific footer. This footer serves as an example of localization features with Core Components

© 2019, WKND Site.

WKND is a fictitious adventure and travel website created by Adobe to demonstrate how anyone can use Adobe Experience Manager to build a beautiful, feature-rich website over a single weekend. This site is built entirely with Adobe Experience Manager Core Components and Archetype that are available as open source code to the public. The entire site source code is available as open source as well and is accompanied with a detailed tutorial on how to recreate the site.

Many of the beautiful images in the WKND site are available for purchase via Adobe Stock.
